

AirBeam 1.6 adds motion controlled photo and video alerts

Published on 10/14/12

Applogics today announces AirBeam 1.6, a major update to their unique video monitoring app. AirBeam streams live HD video and audio from the built-in cameras of iPhones, iPads and iPods to other iDevices, Macs or a Browser. AirBeam cameras now also can send email alerts with photo and video attachments in case of detected motion or audio events. Additionally AirBeam 1.6 was optimized to take full advantage the performance and additional screen real estate offered by new iPhone 5 and iOS 6.

Eurasburg, Germany - Applogics today is delighted to announce the release of AirBeam 1.6, the next major release of their high quality video surveillance solution for iOS. AirBeam is an universal app for iPhones, iPads and iPods that streams live video and audio from the built-in cameras and microphones in amazing quality over a WiFi or 3G network. The stream can be watched on other iDevices, Macs or with a standard web browser. AirBeam runs simultaneously on any number of devices allowing flexible multi-camera and multi-monitor setups.

AirBeam 1.6 now introduces email alerts, triggered by motion and audio detection. When activated, AirBeam automatically takes photo snapshots of events taking place in front of the camera, attaches them to an email and sends it to a configurable email address. Even short video clips of the detected events can be recorded and attached to the mails. In case too much action is going on in front of the camera, a rate limiter allows to limit the number of emails being sent in a time period.

Additionally AirBeam 1.6 has been optimized for the iPhone 5 and iOS 6. It takes full advantage of the additional screen real estate and the performance the iPhone 5 provides. With this optimization it was possible to almost double the video encoding speed and frame rates compared to the previous version on an iPhone 4s, especially when streaming in HD resolution.

Device requirements:

- * Compatible with iPhone, iPod touch, and iPad
- * Video streaming requires built-in camera (iPhone 3GS/4/5, iPod 4G/5G, iPad2/3)
- * Audio streaming requires built-in microphone (iPhone 3GS/4/5, iPod 4G/5G, iPad1/2/3)
- * Operating System iOS 4.3 or higher
- * Universal Application
- * 8.3 MB

Pricing and Availability:

AirBeam 1.6 for iOS is \$3.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the iTunes App Store in the Photo & Video category.
