

## Synium Software releases CleanApp 4 Public Beta

Published on 10/26/12

Synium is proud to announce the immediate availability of CleanApp 4 Public Beta. The next generation of Synium's popular uninstallation and system maintenance has been completely rewritten and offers new features as for example a brand new user interface, tools for system maintenance, sophisticated methods for finding unused and obsolete files and a much clearer perspective on all extensions installed in the system.

Mainz, Germany - If you have ever asked yourself, why your free hard drive space is constantly shrinking and why your system gets slower and slower although it had been really snappy after installing, CleanApp will provide you with answers. CleanApp 4 has been rewritten from the ground up in order to make your work with CleanApp more pleasant. The brand new user interface focusses on the most often required features and offers you quick access to all important tasks.

Having used your Mac for months and years many large and no longer needed files will accumulate. CleanApp looks for files that have not been touched for a long time and you can decide whether to keep these files or delete them. Furthermore, CleanApp looks for duplicate files, empty folders and unnecessary language packs.

CleanApp 4 allows you to access OS X's built-in maintenance scripts without having to open the Terminal or another utility. Additionally, CleanApp 4 checks your hard drive for possible errors or impending drive failure, repairs user permission or creates a new Spotlight index in case it's causing problems or slows down your system.

CleanApp 4 does not only search for applications, it also shows you which system extensions, fonts, Dashboard widgets, QuickTime components or Safari plugins are installed in your system. Since they are usually hard to find in OS X and placed in several different locations, it's not easy to know on which extensions are loaded and possibly slow down your Mac. CleanApp views them all neatly arranged in well-structured lists. Only a few clicks are required to say good bye to old extensions which might have been there for years without helping you at all.

### System Requirements:

- \* CleanApp 4 requires OS X 10.6.8 and later
- \* OS X 10.8 Mountain Lion is fully supported

### Pricing and availability:

While in public beta cycle, CleanApp 4 sells for just 14.99 USD. After releasing the final version, CleanApp will be priced at 19.99 USD. Updates for customers who purchased CleanApp before June 1st, 2012, are just 4.99 USD. The update is completely free of charge for all customers who purchased Version 3 on or after June 1st, 2012.
