

Tension Software releases Password Repository 2.8 - Password Manager

Published on 04/14/09

Tension Software today announces Password Repository 2.8 for Mac OS X. Password Repository

can manage all passwords and accounts used on internet. Passwords and associated data are managed inside a protected and always encrypted document allowing maximum security. In the case of unauthorized access or if the Mac is stolen, data saved inside Password Repository are not readable. Documents are readable only by the authorized user providing the correct master password.

Milano, IT - Tension Software today announces Password Repository 2.8 for Mac OS X. Password Repository can manage all passwords and accounts used on internet and everywhere

by users. Passwords and associated data are managed inside a protected and always encrypted document allowing maximum security of data. In the case of unauthorized access or if the Mac is stolen, data saved inside Password Repository are not readable. Documents are readable only by the authorized user providing the correct master password.

Password Repository was designed to be easy, safe, fast and effective. User interface shows all the accounts inserted in a table and user can sort any column with a click. Using categories associated to passwords allow to structure and search content in a very effective way. Selecting a row inside a table, it is possible to show and modify in detail all the relative data, using a layout widely used by many of the most used Mac software know as 'Master and Details'. Saving on disk is always in encrypted form in a easy way, without further action by the user.

The software is written for Mac OS X in Cocoa since its first release. User interface is absolutely simple and this make Password Repository easy to be adopted by any mac user. Password Repository is on the market for a long time and can insure protection of data thanks to the same basic technology at the foundation of Mac OS X. Data cryptation is made using native library included in Mac OS X without the use of additional libraries.

Feature Highlights:

- * Native for Cocoa
- * Easy to use
- * Data protection via Blowfish encryption
- * Custom password generator to create new passwords for new accounts setup
- * Safe and stable
- * Customizable autosave and autolock documents
- * Autorecovery document feature always on
- * Use and open data as standard documents on disk
- * Various data allowed to be inserted with account and password as: email, userID, web address and notes

System requirements:

- * Mac OS X 10.4 or later (Optimized for Mac OS 10.5)
- * PPC or Intel Mac (Universal Binary)

New in this release:

- * Customizable autosave documents
- * Customizable background autolock mode
- * Autorecovery document feature always on
- * Various improvements
- * Bug fix
