

Tension Software releases Password Repository 2.1

Published on 06/14/07

Password Repository is the Mac OS X application written using Cocoa that let users store and manage all their passwords in documents protected and encrypted.

FOR IMMEDIATE RELEASE:

Password Repository let users store and manage all their passwords in documents protected and encrypted. Password Repository is a Mac OS X program, natively realized since the first release for Mac OS X using Objective-C and the last Cocoa framework. Data are saved on disk automatically encrypted using Blowfish algorithm and are unreadable without opening them with the right password. Password Repository shows data in a table view and let the user order items by any columns with just a click.

Any content is searchable using a search field with data displayed as-you-type. Export and import of data. It manages unlimited number of documents with unlimited number of passwords. Can open a default document at startup with most used passwords. It is really simple and effective allowing the user to store his precious, reserved data on disk in a safe way. Password Repository is the program to manage passwords in a true "Mac Way"

Version addition in release 2.1:

- * Color categories
- * Live updates of records changing categories
- * Better categories management
- * Improved 'Import' functions
- * Documents remember position and columns width
- * Copy account button
