

Open Lab releases Teamwork 4 - Project Manager

Published on 04/16/09

Open Lab today announced Teamwork 4. This Java web based team work manager software now includes Twitter and Google calendar integration, so that one can manage timesheets and projects while still using favorite software. It is an easy to adopt tool as all members of the office team will find a dashboard that fits them, and so may help get the group working together. Power users will find all the tools that are lacking in simple to-do managers, in a very friendly web environment.

Florence, Italy - Teamwork released version 4: this Java web based team work manager software now includes Twitter and Google calendar integration, so that one can manage timesheets and projects while still using favorite software. It is an easy to adopt tool as all members of the office team will find a dashboard that fits them, and so may help get the group working together. Power users will find all the tools that are lacking in simple to-do managers, in a very friendly web environment.

Version 4 includes the classical tools for project management and also a business process extension. If used for software or "design" development, it covers Subversion integration and issue tracking. This version has a deeply revised user interface, which keeps "embracing the web", but empowers the basic URL request - page display cycle with dynamical web parts that allow in place and multi-line editing, which gives fast reward to the user; it is also easier to reach information, through silently smart search functions, group rankings and empowered dashboards.

Other interesting new features are availability of the user interface in German, Spanish, Portuguese and Italian, not just in English, and extended support for localized data and interaction with localized external software, such as the different versions of Microsoft Outlook.

Teamwork user base ranges now from large corporations to small designer teams, and includes also more and more universities and NGO organizations.

Minimum Requirements:

- * Teamwork is made entirely in Java 5, so it runs practically everywhere
- * Mac OS X Version 10.4 Tiger or higher
- * 40 MB Hard Drive space

Free licenses are available for all reviewers.

Located in Florence, Italy, Open Lab was founded in 2001 by Pietro Polsinelli and other 3 partners. Open Lab is focused on two aims, developing web applications and supplying quality design solutions; these two aims often overlap. Web applications and web sites are produced on a shared platform in Java, AJAX, DHTML and Actionscript; design is structured in web design, paper design, interfaces, company identities, packaging, animations and all kinds of creative production. All Material and Software (C) 2001-2009 Open Lab / All Rights Reserved.
