

Typinator 5.4 offers versatile import and export of text snippets

Published on 12/18/12

Ergonis Software today announced the release of Typinator 5.4, an improved new version of their popular text expander. Typinator is a powerful, yet elegantly simple solution that boosts your productivity by automating the process of inserting frequently used text and auto-correcting typing errors. The new version offers versatile import and export of text snippets in various formats. This makes it really easy to create Typinator sets from external data.

Hagenberg, Austria - Ergonis Software today is thrilled to announce the release of Typinator 5.4, an improved new version of their popular text expander. The new version offers versatile import and export of text snippets in various formats.

Typinator can now export and import abbreviation sets in two popular formats: tab-delimited text and comma-separated values (CSV). This allows Typinator users to prepare large collections of abbreviations offline with text editors, spreadsheet programs and database applications. Transferring the collections into Typinator is then just a matter of selecting the Import command. This makes it really easy to create Typinator sets from external data. In the opposite direction, Typinator can export text snippets as tab-delimited text and CSV files, so you can manipulate these files externally and reimport the resulting files back into Typinator.

Import from TextExpander has been improved as well, now converting date/time calculations, special keys, and input fields. Typinator 5.4 contains many further enhancements and offers improved compatibility with OS X 10.8 (Mountain Lion) and third-party applications like Mail, Adobe Photoshop CS 6, Default Folder, and 4th Dimension.

Visit Ergonis Software's website to learn more about the changes in this release and to download and try the new version.

Typinator is a powerful, yet elegantly simple solution that boosts your productivity by automating the process of inserting frequently used text and auto-correcting typing errors. Across all applications, it detects specific sequences of typed characters and automatically replaces them with text snippets, graphics, URLs, dates and special characters.

System Requirements:

Typinator 5.4 requires Mac OS X 10.5.8 or newer and is fully compatible with OS X 10.8 (Mountain Lion).

Pricing and Availability:

Typinator can be purchased securely on the Ergonis Software website. The upgrade to Typinator 5.4 is free for anyone who owns a valid license for Typinator 5. Upgrade paths are available for owners of older licenses. See the company's web site for information about purchases, including enterprise licenses, volume discounts, and upgrade pricing offers. Instead of purchasing Typinator by itself, customers can get the Ergonis Productivity Bundle that also contains two of the company's other productivity tools, PopChar X and KeyCue.
