"We are excited to offer this option to readers who want to learn the basics of the American accent using their iPad," says author Ryan. "More and more people are using the iPad to read, learn and communicate. Almost all of the international professionals who enroll in my accent reduction coaching programs use iPads both at home and for work. Many of them really wanted an iPad book for the American accent.

That's why my team and I went to work. We took the lessons that I use in my accent training courses and put the content together using the latest digital media tools to create the first multi-touch iBook for American accent learning.

It's the interactive features that make this book unique. We've embedded videos, slideshows, audios, quizzes, and visual graphics into the book in order to make the content fun, interactive and engaging. As a trainer and instructor, I know that if people are engaged and having fun, they are more likely to learn and retain the material!"
