London, UK - The Pixelmator Team released Pixelmator 1.4.1 today, an update to the revolutionary GPU-powered image editing tool that provides everything needed to create, edit, and enhance still images. Available as a free software update, Pixelmator 1.4.1 features a noise filter, improvements, and bug fixes. The Pixelmator Team is also introducing a new learning website and a new user manual for Pixelmator users.

"Tens of thousands of Mac users have fallen in love with Pixelmator," said Saulius Dailide of the Pixelmator Team. "With the new learning website and manual, the Pixelmator Team continues to demonstrate its commitment to Pixelmator quality and attentiveness to the needs of its users."

Pixelmator 1.4.1 introduces a noise filter, which allows the artist to quickly apply random pixels to an image. This allows users to create realistic textures and special effects and provides advanced retouching capabilities. The current update also offers minor user interface and performance improvements as well as bug fixes to the application.

The Pixelmator Team is also launching a new learning website for Pixelmator users. This new website is all about learning how to use Pixelmator. It features helpful text, video, and third-party tutorials, tips, and tricks, as well as practical resources to make the most of the powerful Pixelmator features and tools.

Further, the Pixelmator Team released a new user manual. Fully updated with information about the most recent version of Pixelmator, this manual introduces users to the Pixelmator interface and its powerful features, providing detailed instructions about using Pixelmator tools. The 300-page manual, full of useful information for intermediate as well as for beginning users, is available as a free download at the Pixelmator website.
