

## MaBaSoft Releases Currency Assistant 3.1.8

Published on 01/17/13

MaBaSoft has announced Currency Assistant 3.1.8, an update to their currency converter for Mac OS X. Currency Assistant is a very flexible currency conversion calculator that provides 174 currencies, including all major circulating currencies plus the 17 Eurozone legacy currencies, allows the creation of multiple converters, and automatically updates exchange rates over the Internet. Version 3.1.8 restores the automatic update of the Bank of Italy rates and introduces the new Zambian kwacha.

Milano, Italy - MaBaSoft has announced the release of Currency Assistant 3.1.8, the latest version of their currency converter for Mac OS X. Currency Assistant allows users to easily calculate conversions between 174 world currencies (all major circulating currencies plus the 17 Eurozone legacy currencies) and updates exchange rates automatically over the Internet.

Currency Assistant is a very flexible currency converter: users can define multiple conversion windows which can contain up to 24 currencies. Converters are very easy to set up or edit and have an Action pop-up menu to quickly accomplish recurrent tasks, a Rate pop-up menu to view and copy exchange rates, and a tape in a drawer to log results.

With Currency Assistant users can quickly calculate conversions to multiple currencies and automatically convert the result of expressions. In addition to that, multiple amounts can be copied from a spreadsheet or another application and pasted to the desired input display: Currency Assistant will automatically convert the pasted amounts and log results in the tape. Finally, Currency Assistant can import text files, Word documents, and text clippings containing series of amounts and automatically convert the enclosed values.

Working with results is also very easy. Amounts can be copied from a display or from the tape, conversions can be exported by dragging them from the tape to a document in another application, and the tape can be saved to a RTF or plain text file and printed. Moreover, configurable Copy Special commands allow users to copy results including ISO code, currency name, or symbol and quickly copy frequently used text snippets containing conversion results, ISO codes, currency names, and symbols.

Managing currencies is simple and straightforward with Currency Assistant. The fully revised Currencies window allows users to quickly search, sort, edit, batch edit, and restore currencies, set a base currency, and automatically update exchange rates. Currency Assistant uses the rates published by the European Central Bank, the Bank of Canada, the International Monetary Fund, and the Bank of Italy to automatically update exchange rates over the Internet.

Version 3.1.8 restores the automatic update of the Bank of Italy rates after the Bank of Italy changed the location of the Last foreign exchange rates CSV file and replaces the old Zambian kwacha (ZMK) with the new Zambian kwacha (ZMW). The new kwacha was introduced on January 1, 2013 with 1 ZMW = 1,000 ZMK.

Language Support:

\* US English, German, French, Dutch, and Italian
