

Pixel Game 1.0 released for iOS - Picture Guessing Game

Published on 01/27/13

California based independent developer, Bennett Berger today introduces Pixel Game 1.0, his unique picture guessing game developed for iPhone, iPad and iPod touch. Fun for the entire family, Pixel Game challenges players to make their way through numerous levels as they guess different pictures. These pictures start out pixelated and become less pixelated (easier to guess) as time runs down. Users are given four choices for each picture and must select the correct answer in the allocated time.

West Hills, California - Independent developer, Bennett Berger today is thrilled to announce the release and immediate availability of Pixel Game 1.0, his unique picture guessing game developed for iPhone, iPad and iPod touch. Starting at level one, a blurry pixelated image is displayed. As time starts to tick by, the pixels decrease in size which makes the picture clearer. Each picture contains one correct answer along with three incorrect answers. Users must select an answer before the time runs out.

Users earn more points the faster they select the correct answer. If an incorrect answer is chosen, no points are awarded and the next picture is displayed. Four out of five pictures must be answered correctly in order to move on to the next level. If less than four are answered correctly, that same level is to be played again. However, each play is unique because of the randomness of the pictures chosen in the level, the randomness of the picture order, and the random placement of the answers.

After every level (five pictures), Pixel Game sums up your score and displays the total earned points. When connected to Game Center, players can compete with others for the highest scores. Once all of the levels are played, the options are to either play them again to try to beat their high score or purchase more levels. Playing the same levels over is likely to be a unique experience due to the randomness in the level creation.

Device Requirements:

- * iPhone 3GS, 4, 4S, iPhone 5, iPod touch (3/4/5 gen) and iPad
- * Requires iOS 6.0 or later
- * 30.4 MB

Pricing and Availability:
