

Mailings 1.9.18 Released

Published on 06/19/07

Mailings is a full featured application for batch emailing that delivers any web page or plain text document with attachments to multiple recipients for marketing, news announcements, product updates etc.

Mailings facilitates the task of delivering regular bulk email distributions with such features as logging, progress monitoring, scheduling, error recovery, throttling, personalization and much more. Integrates with your mail client, most common browsers, Address Book and Entourage to simplify its functionality. The one window user interface makes the program a breeze to learn and fun to use.

Mailings Key Features

- * Simple intuitive interface
- * Send HTML or plain text
- * Imports comma-separated (CSV) or tab-separated (TSV) text files
- * Full Address Book support for groups & distribution lists
- * Imports Entourage groups directly
- * "Simulate Send" mode for testing or learning the program
- * Handles thousands of recipients
- * "Throttling" to control message rate: inter-message delay or batching
- * Scheduling mailings
- * Personalized greetings
- * Templates for adding Address Book data to message content
- * Templates support AppleScript content generation
- * Subject line can be a template
- * Plain text alternatives
- * Supports all character sets
- * Mail priority, return receipt, X-Mailer headers
- * Add attachments of any type
- * Detailed progress monitoring
- * Spotlight searchable documents
- * Embedded Image attachments
- * Can image HTML documents as JPEG
- * Much more!

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

Limit Point Software has produced software exclusively for the Mac community for over ten years. The application areas include web crawling, bulk email, Quicktime editing, document search and much more. A novelty is our collection of "Utility Software" which consists of a bundle of independent small programs each of which targets a specific task.
