

## Top Metronome App Tempo Receives UI Refresh, Free Version Now Available

Published on 03/18/13

Frozen Ape announces Tempo 3.0, a complete redesign of the app's interface on the iPhone. Tempo, the bestselling and most accurate metronome on the App Store, features four modes: Basic, Setlist, Practice and Gig. Users can now switch between modes optimised for different situations. This update is free for existing Tempo users. In addition, Tempo Lite is now available as a free download so new users can try out its core functions before upgrading to the full suite of features.

Singapore, Singapore - Frozen Ape has released Tempo 3.0, a complete rewrite of the iOS app's user interface on the iPhone. This is the biggest update since Tempo exploded onto the market four years ago and quickly became musicians' favorite. "As user requests added more and more features to Tempo, it soon became clear that they were outgrowing the original design." says Frozen Ape founder Zen Ho. "To better accommodate the expanded feature set, we decided to rethink the interface. The solution is to show, hide and resize features according to the user's immediate needs."

The new interface has a modular design that morphs between four layouts. Each mode exposes a different combination of features appropriate for different situations. The Basic mode is great for general, no-frills usage. The Setlist mode is intended for creating and managing setlists. The Practice mode lets you load presets from a setlist and track how many bars or for how long each preset is played. During live performances, the Gig mode puts the setlist in focus, getting rid of unrequired controls. Users with basic needs can stick to a favorite mode, while power users can switch between modes to optimize their experience.

Equally exciting is a new Theme Editor, available as an upgrade via in-app purchase. The editor lets users customize the app to any color scheme, for instance, to match their band colors. Any image can be used as a wallpaper. Themes can be shared via email. To start users off, a Premium Theme Pack of ten themes is also available as an upgrade.

iOS users can now enjoy the core features of Tempo for free in a Lite version. As a special treat, the iPhone version includes the Tracker Module for tracking practices. Tempo Lite can be upgraded to unlock the complete suite of features, and is available immediately for download on the App Store.

### Key New Features:

- \* Flexible interface that morphs between four modes
