

rubiTrack 1.6 - GPS Enabled Activity Tracking For The Mac and iPhone

Published on 05/12/09

toolsfactory software today announced the release of rubiTrack 1.6, a GPS enabled activity tracking software for the Mac. Utilizing latest Mac UI technologies, rubiTrack lets you display, analyze and organize your outdoor activities. rubiTrack is for runners, bikers, walkers, hikers, skiers and everyone else who logs GPS data. rubiTrack reads tracks from GPS enabled devices like the Garmin Forerunner, Garmin Edge, AMOD GPS Trackers, Nike iPod and the iPhone 3G.

St. Marein, Austria - toolsfactory software announces the release of rubiTrack 1.6, an update to its GPS enabled activity tracking software for the Mac. Utilizing latest Mac UI technologies, rubiTrack lets you display, analyze and organize your runs, bike rides, walks, hikes, skiing tours and all other outdoor activities.

rubiTrack reads tracks from GPS enabled fitness devices like the Garmin Forerunner, Garmin Edge, AMOD GPS Trackers and Nike iPod as well as the iPhone 3G utilizing rubiTrack for iPhone. rubiTrack also imports activities stored in GPX, TCX and other file formats. Activities are easily accessible through dynamic activity groups which automatically categorize by activity type, location, route, date, distance and workout duration.

rubiTrack 1.6 adds new features and fixes issues of previous releases.

rubiTrack comes with visual chart and track features that let you analyze workouts quickly yet thoroughly. You can select areas in the track and view instant statistics. You can set custom markers, measure from any point on the track or split you select using the mouse.

rubiTrack for iPhone records tracks, manages a recorder history and syncs with rubiTrack for the Mac directly over Wi-Fi.

Main Features:

- * Activity collection with instant track preview
- * Activity calendar and list
- * Direct sync with GPS Devices and GPX file import
- * Interactive maps and charts with instant statistics
- * Intelligent adaptive filtering
- * Activity comparison
- * Uses GPS data as well as heart rate, cadence and power fitness data
- * GPX export for track sharing and uploading
- * Athlete history
- * Workout summary for weekly, monthly and yearly statistics

New in this Update:

- * Adds TCX Course export for use on Garmin Edge cycle computers
- * Improves reliability of track metrics
- * Improves Garmin Oregon direct sync
- * Changes the power averaging method to include zero-effort zones in the average
- * Changes in weather data handling
- * Fixes an issue with elevation smoothing
- * Fixes an issue with total ascent and descent values
- * Fixes an issue with speed charts

Language Support:

rubiTrack is fully localized in English, French, German, Italian and Spanish.

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

Minimum Requirements:

- * Mac OS X Version 10.5 Leopard or higher
- * Universal Binary for PowerPC and Intel
