

## MLSwitcher 2.0 - Improved Input Language Manager for OS X

Published on 04/03/13

Bluezbox Software today announces MLSwitcher 2.0, an update to their improved input language manager for Mac OS X. MLSwitcher makes life easier for those of us who have to input text in several languages or share their time between Windows and Mac OS X. It addresses a fundamental flaw in the user experience of multi-language OS X systems: mode. The app lets you make a shortcut for setting correct input source. Version 2.0 includes new combos for cycling through layouts and minor bug fixes.

Vancouver, Canada - Bluezbox Software today is proud to announce the release of MLSwitcher 2.0, an update to their improved input language manager for Mac OS X. MLSwitcher is a simple utility that makes life easier for those of us who have to input text in several languages or share their time between Windows and Mac OS X. But though simple, it addresses a fundamental flaw in the user experience of multi-language OS X systems: mode.

Each time when user wants to input text, they have to perform fast but nevertheless distracting sequence of actions: check current input language, if it's not correct - toggle through all available input sources to the required one. By providing the way to assign individual key combination for each input language, MLSwitcher lets you make shortcut to the very last step of this sequence: setting correct input source. Which boosts productivity and makes overall user experience better.

Mode is also a problem for people who work with both Windows and OS X on a daily basis and have to manage several input languages. Key combinations for switching between languages in these systems are quite different and user has to make mental effort to use combo specific to OS being used instead of letting muscle memory to take care of it. The solution: MLSwitcher lets you set Windows-style key combination to toggle through available languages Two operating systems - one combination.

### What's New in Version 2.0

- \* Add Windows-style combos for cycling through layouts
- \* Fixed bug with sub-layouts

### System Requirements:

- \* OS X 10.7 or later
- \* 0.4 MB

### Pricing and Availability:

MLSwitcher 2.0 is only \$2.99 USD (or equivalent amount in other currencies) and available worldwide through the mac App Store in the Utilities category.
