

HoudahGPS 1.0 - Freeware GPS Track Log Downloader and Converter

Published on 06/25/07

HoudahGPS is a freeware frontend to the open source command line tool GPSTabel. HoudahGPS allows you to transfer track log and waypoint data from your Garmin, Magellan or Wintec GPS devices. It connects via USB to the Garmin and Magellan devices. It interfaces with the Wintec WBT-100, WBT-101 and WBT-201 devices using Bluetooth.

Luxembourg - June 23, 2007 - Houdah Software s. à r. l. celebrates the Luxembourg national holiday by releasing its first freeware product.

About HoudahGPS:

HoudahGPS allows you to transfer track log and waypoint data from your Garmin, Magellan or Wintec GPS devices. It connects via USB to the Garmin and Magellan devices. It interfaces with the Wintec WBT-100, WBT-101 and WBT-201 devices using Bluetooth.

HoudahGPS may also be used to convert between the GPX, NMEA and KML log file formats. The Sony GPS-CS1 track logger uses a special variant of the NMEA format which may also be read.

Possible uses of HoudahGPS include:

- Creation of backup copies of track log files for later use with HoudahGeo
- Conversion of track logs to KML for visualization in Google Earth.

Pricing

HoudahGPS is a freeware product based upon the open source command line tool GPSTabel.
