

## Tension Software releases Password Repository 2.2

Published on 06/28/07

Tension Software releases Password Repository 2.2, a native Mac OS X program to manage general use passwords stored inside protected documents accessible only by the user.

Password repository let users store and manage all their passwords in documents protected and encrypted. Password Repository is a Mac OS X program, natively realized since the first release for Mac OS X using Objective-C and the last Cocoa framework. Data are saved on disk automatically encrypted using Blowfish algorithm and are unreadable without opening them with the right password.

Password Repository shows data in a table view and let the user order items by any columns with just a click. Any content is searchable using a search field with data displayed as-you-type. Export and import of data. It manages unlimited number of documents with unlimited number of passwords. Can open a default document at startup with most used passwords. It is really simple and effective allowing the user to store his precious, reserved data on disk in a safe way. Password Repository is the program to manage passwords in a true "Mac Way"

Version addition in release 2.2:

- \* New EMAIL field to store email used to register at websites
- \* New clever open URL function
- \* Bug fix
