

Weather Tune For iPad - Version 2.0 Storms into the App Store

Published on 04/23/13

UK based app developer Rory Buckley today announces Weather Tune 2.0, an update to his popular weather app for iPad. Weather Tune acts as a powerful data driven weather resource, using the iPad's location abilities to access and display accurate weather statistics within the app's virtual radio themed interface. Version 2.0 introduces an improved weather display, NOAA Weather Radio Streams, a new weather satellite/radar map of the users current location, and much more.

Devon, United Kingdom - App developer Rory Buckley today is thrilled to announce the release of a major update to the Weather Tune app. Version 2.0 includes a variety of upgrades and improvements, building off the successful and alternative theme from the previous version.

Being a weather enthusiast, Rory Buckley's vision for Weather Tune has always been to produce a perfect balance of audio and visual weather data within the app. This is immediately reflected in version 2.0, with the addition of 100 NOAA Weather radio streams covering many US based locations. On the visual side, the update brings some interesting additions and improvements, starting with a whole new refreshed weather display for your current weather conditions. There is also a detailed forecast feature for the next day, but the most noticeable addition has to be the satellite radar option that cleverly shows you an up-to-date satellite map image of based on your current location, detailing realtime cloud cover and rainfall within your area.

Rather than your general app update, version 2.0 of Weather Tune is more of an 'upgrade'. The app has become more weather intelligent, feeding off more detailed weather data from trusted sources. The radio side of the app now has much more significance with the addition of NOAA radio streams. Rory Buckley values feedback from his app users, he gratefully considers any suggestions that he receives and combines them with his own creativity to produce something unique. He still has many more exciting future plans for Weather Tune and has huge motivation in taking the weather app to levels beyond anything that have yet to be seen.

Device Requirements:

- * Compatible with iPad
- * Requires iOS 4.3 or later
- * 15.9 MB
