

Weather Pod For iPhone - Weather Intelligence in The Palm of Your Hand

Published on 05/16/13

UK based indie developer Rory Buckley today introduces Weather Pod 1.0 for iPhone and iPod touch. Weather Pod takes both a unique and advanced approach to how weather can be displayed on a handheld iOS device, taking advantage of touch and swipe gestures to give the user a fully interactive experience combined with stunning visuals and a variety of features. The motion background is cleverly designed to reflect your actual current weather conditions, whether it be rain, snow or thunderstorms.

Devon, United Kingdom - App developer Rory Buckley today is thrilled to announce the release of Weather Pod for iPhone and iPod touch. Weather Pod is a data-packed weather application that grabs all your necessary weather data (based on your current location) and displays it in a beautiful and unique way. Weather Pod has been cleverly constructed to show specific weather data based on required touch and swipe actions, making it a fully unique interactive experience.

The first thing that you'll notice about Weather Pod, is its live-motion interface. The motion background is cleverly designed to reflect your actual current weather conditions, whether it be rain, snow or thunderstorms. The weather can be initially seen in the form of a simple pod-like icon which delicately sits in the middle of your screen. Upon touching this icon, it will elegantly eject a selection of live weather information (such as current temperature, wind speed/direction etc.) around the screen.

The user has the option to simply show or hide this information via simply touching the live weather icon. The app also makes use of iOS swipe abilities, with the ability to access features such as weather forecasts, sunrise/sunset times & historical weather statistics. One feature that does stand out is the rain (or sleet, snow...) predictor, when the predictor button is touched, the weather icon will cleverly produce a raindrop that displays the likely real-time percentage of it raining in your location.

With every corner of general weather being covered, Weather Pod also has the ability to detect any existing weather alerts within your area. The app has been programmed to notify the user with a flashing warning symbol when any alerts have been detected. Details of any alert/s can then be viewed via touching the warning symbol. In addition to the features already mentioned, Weather Pod also has a live satellite map feature, detailing current cloud cover within your location.

Rory Buckley has talked of his confidence and belief in Weather Pod as a truly advanced and beautiful weather application. He is excited and hopeful that Weather Pod can achieve an established status as a popular iOS weather app.

Device Requirements:

- * iPhone, iPod touch, and iPad
- * Requires iOS 4.3 or later
- * 14.3 MB

Pricing and Availability:

Weather Pod 1.0 is only \$0.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the App Store in the Weather category.
