

Webhosting.net Chooses SME's Universal Cloud Access Technology

Published on 05/29/13

Webhosting.net is now offering Storage Made Easy's universal access services to its hosting customers. Storage Made Easy's federated Single-sign on creates one unified access environment for Exchange, multiple cloud services, virtual desktop, and local storage. Storage Made Easy supplements existing cloud and network security measures with the highest levels of regulatory compliance, audit tracking, and information protection.

New York, New York - Webhosting.net is now offering Storage Made Easy's universal access services to its hosting customers.

"We chose Storage Made Easy's technology because it offers features and functionality that no one else on the market has," said Anton Resnick, CEO of Webhosting.net.

Storage Made Easy provides complete connectivity services, ensuring secure single virtual file access no matter where the data is stored - cloud, locally, NAS/SAN, etc. - and across any device in a BYOD environment- mobile, tablet, desktop, Internet. Storage Made Easy supplements existing cloud and network security measures with the highest levels of regulatory compliance, audit tracking, and information protection.

Webhosting.net provides managed IT services ranging from Microsoft Hosted Exchange, to virtual and cloud hosting, to business continuity through a carrier-class colocation facility for everything from entry-level organizations to enterprises. It has installed the Storage Made Easy appliance into its OpenStack environment, connecting it directly with Webhosting.net's existing VM infrastructure and storage hardware, allowing for high availability and redundancy.

"Webhosting.net's thousands of clients are demanding complete connectivity to all information, no matter their physical location," said Storage Made Easy General Manager, Americas, Doug Rich. "We enable Webhosting.net to provide the service with minimal hassle on their part and no hassle on the part of its customers."

Storage Made Easy's support of Active Directory and single sign-on allows Webhosting.net to create a single platform for all the IT requirements of SMBs and SMEs, including email and storage at high levels of security. With Storage Made Easy, administration across all environments is easy; all access changes can be handled in a single step, within a one control panel.

"One of the main reasons for our choosing the product is our push into the BYOD market. Our customers are demanding a single platform for multiple cloud services, and Storage Made Easy allows us to deliver. Using Storage Made Easy enhances our customers' experience and revenue stream with minimal integration, said Mr. Jose Uribe, COO at Webhosting.net.

About WebHosting.net:

Since 1998 WebHosting.net has provided reliable, scalable and secure web hosting solutions for individuals and businesses of all sizes. WebHosting.net prides itself on solid network reliability and continuous customer service, delivering services through a carrier-class colocation facility that ensures efficient delivery of low-cost hosted services.
