

Alex Mills Design releases QuickPost 2 Public Beta - New Blog Editor

Published on 05/31/09

Alex Mills Design has released QuickPost 2 public beta. QuickPost is a new desktop blog editor designed for everyone, with an advanced visual editor, a first for the mac platform. Take entries further with the html editor and store drafts while offline. The visual editor gives you an on-the-fly look at how images, videos, maps and text will look and behave on your blog. Just like Pages or Word. Shorten URL's with Tr.im and tweet new entries on twitter.

Perth, WA/Australia - Alex Mills Design has released QuickPost 2 public beta. QuickPost is a blog editor designed for everyone. Write without code in the advanced visual editor, add images, videos and maps with ease with offline storage. Write complete posts without code in the visual editor or take them further in the source editor.

The visual editor gives you an on-the-fly look at how images, videos, maps and text will look and behave on your blog. Just like Pages or Word. The source code editor allows you to add features and custom html to entries. Using Core Data, you can have multiple blogs and user accounts for editing entries while offline. Once posted you can tweet it for the world to know. Keep in mind that this is a beta product so more features and refinement will come during the test period.

Feature Highlights:

- * Offline Post Storage
- * Multiple Blog and User accounts
- * More powerful and stable visual editor
- * Source code editing
- * URL Shortening
- * Tweeting new posts
- * Search and add maps and videos to entries
- * High control of web images
- * Powerful hyperlink creator for websites and mail-to links

Example Minimum Requirements:

- * Mac OS X Version 10.5 Leopard or higher
- * Universal Binary for PowerPC and Intel

Pricing and Availability:

QuickPost beta is free and works with Google Blogger. Wordpress is coming soon. The app will cost \$15 (USD) when released. Check the website for full features.
