

## **BiiSafe Launches Modern Home Security System and Personal Safety Device**

Published on 06/12/13

BiiSafe launches Biisafe 2.0, an affordable home security system based on mobile technology, is available as an app for iOS and Android devices. The same app can be also used as a personal safety device. BiiSafe home security system sends pictures or video clips directly to the user's phone. The app in an iOS device can be taught to recognize different alarm sounds, like fire alarm or burglary alarm, and send a notification about them to the user.

Espoo, Finland - BiiSafe launches Biisafe 2.0, an affordable home security system based on mobile technology, is available as an app for iOS and Android devices. The same app can be also used as a personal safety device.

BiiSafe home security system sends pictures or video clips directly to the user's phone. The app in an iOS device can be taught to recognize different alarm sounds, like fire alarm or burglary alarm, and send a notification about them to the user. The home security system also monitors power cuts. It is possible to leave a device to monitor at home, another at for example holiday house or boat, and view all the places with one personal device or use Internet browser for viewing.

Used as a personal safety device the BiiSafe app uses GPS location tracking allowing the user to locate his or her loved ones or for example track his or her jogging route. With the personal safety device the user can send and receive alarms on the move wherever he or she is.

Home security system made affordable and user friendly.

"We wanted to make a versatile security solution that could be used for home security and personal safety and that is affordable to anyone. Traditionally a home security system can be quite expensive and you need different devices or software for different purposes. BiiSafe app combines typically separate devices and software into one affordable package. And you can try it for free," explains Jouni Suutarinen, CEO of BiiSafe.

"We have also invested in the user friendliness and the easiness to take the home security system or personal safety device into use. It takes only a couple of minutes to start using the solution. You just download the app from the App Store or Google play to two devices. One device serves as a monitoring device and with the other device, you can watch and operate the monitoring device. Devices are connected automatically and you are ready to go," Suutarinen continues.

Language Support:  
English and Finnish
