

Text2Epub 1.1 for Mac OS X - Convert Plain Text to EPUB

Published on 06/19/13

Bluezbox Software today announces Text2Epub 1.1 for Mac OS X, an update to its utility application that offers drag n' drop conversion of plain text documents into the EPUB file format. Especially designed to accommodate eBook publishing, EPUB files are easily displayed on a wide variety of readers, computers, and mobile devices. The app offers fast, high-quality conversion with user selectable meta-data, font, source encoding, book cover, and export to the iTunes eBook Library.

Vancouver, Canada - Bluezbox Software today is pleased to announce Text2Epub 1.1 for Mac OS X, an update to its utility application that offers drag n' drop conversion of plain text documents into the EPUB file format. EPUB files are especially designed to accommodate eBook publishing, and they are easily displayed on a wide variety of readers, computers, and mobile devices. The app is ideal for self-publishing, and it offers fast, high-quality conversion with user selectable meta-data, font, source encoding, book cover, and export to the iTunes eBook Library. The update adds Russian-language localization.

Feature Highlights:

- * Convert plain text (.txt) to EPUB (.epub)
- * Fast and high-quality conversion
- * Set cover image for EPUB
- * Supports 36 encodings
- * Embed one of 6 fonts
- * Automatically add EPUB books to iTunes

The explosive growth of Kindles, Nooks, iPads, and other eReaders has conclusively demonstrated the acceptance of eBooks by publishers and consumers. Text2Epub allows users to drag any manuscript in plain text format (.txt) onto the application's simple control window, click Convert, and quickly produce a file (.epub) ready for online distribution.

The EPUB standard was carefully designed for interoperability between dozens of readers, computers, and mobile devices. Specifically, "EPUB is designed for reflowable content, meaning that an EPUB reader can optimize text for a particular display device. EPUB also supports fixed-layout content. The format is intended as a single format that publishers and conversion houses can use in-house, as well as for distribution and sale. It supersedes the Open eBook standard," according to Wikipedia.

Users of Text2Epub simply drag n' drop their plain text file into the TXT window. Users may also drag n' drop a graphic into the EPUB Cover window. Next, users may enter the author's name and the book's title into the appropriate fields. Font choices include: None (default), Charis, DejaVu Serif, Droid Serif, Linux Libertine, PT Sans, and PT Serif. Finally, users may choose any one of the Mac's 36 Source Encodings, including: Japanese, Chinese, Korean, Cyrillic, etc. A checkbox stores the finished title in the iTunes eBook Library.

"Convert plain text manuscripts, reports, letters, notes, lists, and messages to the EPUB file format," stated Oleksandr Tymoshenko of Bluezbox Software. "Now you can read eBooks and documents anywhere, and gain complete control over text - font size, font style, and more."

Language Support:

- * English and Russian

System Requirements:

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Mac OS X 10.7 or later
- * 64-bit processor
- * 8.1 MB
