

## **IP Camera Recorder for Mac 1.58 is Released**

Published on 07/03/13

DComplex, LLC announces IP Camera Recorder 1.58, an update to its video surveillance software for Mac/iPhone users. IP Camera Recorder allows users to monitor up to 20 IP Cameras simultaneously on a Mac, record video from the cameras, detect motion and more. The companion free iPhone/iPad app allows users to instantly review motion events, remotely watch live video, search and playback recorded video. The main addition in this version is support for more H.264 IP Camera models.

Rochester, New York - Setting up a video surveillance system at home or an office has never been easier. IP Camera Recorder is an advanced yet easy to use video surveillance solution designed to use the best features of the Apple products. Remote connectivity allows user to record video from IP Cameras on one Mac and remotely review it using slick apps from another Mac, an iPhone/iPad or any computer.

The main addition in this version is improved support for ONVIF-Compatible cameras and added support for more H.264 IP Camera Models, including Acti, Avtech, Basler, Toshiba, Truen, Y-CAM and more. Existing IP Camera Recorder customers can upgrade their software to version 1.58 for free.

DComplex provides seamless and powerful integrated video surveillance solution that includes IP Camera Recorder for Mac, free iPhone/iPad App and the Mac App for remote access. The included Web Client allows remote access from a PC. IP Camera Recorder supports IP Cameras from many popular manufacturers, including Axis, D-Link, EasyN, Foscam, Sony and many more. The list of supported IP Cameras is available at our website.

Pan, Tilt and Zoom (PTZ) cameras can be controlled from the software, even remotely from the iPhone app. The Recorder can record video from the cameras always, or during specified time or only when motion is detected. Visual Video Search offers quick view of all recorded video and visual indication of motion events.

With affordable Day/Night IP Cameras by camera manufacturers such as EasyN, Foscam (see Amazon online), Mac users can now quickly setup a home surveillance system.

### **System Requirements:**

- \* Apple Mac computer with Mac OS X 10.6 or later
- \* Supported IP Cameras. See the link for the details

### **Pricing and Availability:**

IP Camera Recorder 1.58 software for Mac OS X comes with free 30-day trial. It can be downloaded for free from the DComplex website. Pricing depends on number of cameras. Price for 1 camera is \$39.99 USD. Price for 4 cameras is \$99.99 USD. The companion iPhone/iPad app: DComplex IP Camera Recorder Client, is available for free through the App Store in the Utilities category.
