

Dalamser announces Seven for Mac OS X

Published on 07/03/13

UK based Dalamser today announces Seven 1.0.1, a formatted text editor/simple word processor with particular support for Subversion users and technical writers writing documentation for OS X applications. Seven offers all the standard features of formatted text editors, with unique features that make it stand out. The application works with Subversion to correctly handle RTFD documents under version control; no broken version control as with other applications.

Cambridge, United Kingdom - Dalamser is thrilled to announce the release of Seven, a formatted text editor/simple word processor with particular support for Subversion users and technical writers writing documentation for OS X applications. If you work with Rich Text with Graphics (RTFD) in projects using Subversion, are a technical writer producing application documentation in RTFD, or just want the text highlighter to work like a real one, then Seven is the application to get the job done.

Seven offers all the standard features of formatted text editors, with unique features that make it stand out. The application works with Subversion to correctly handle RTFD (rich text with graphics) documents under version control; no broken version control as with other applications.

Seven offers a true highlighter pen; reapplying a highlighter darkens the colour, overlapping different highlighters mixes the colours - just as with a real highlighter pen.

Seven has features to assist in producing application support documentation, in particular in-application documentation; a dynamic word counter; even a special "Save As" feature for pre-Lion aficionados; and more...

Seven's native file formats are RTF and RTFD. Seven can also read and write Word 97, 2003 & 2007, OpenDocument and HTML formats.

Orthographic Note:

The product name has been "transliterated" for this Press Release as it incorporates high-Unicode characters. The name in Unicode character names & codepoints is: LATIN CAPITAL LETTER S; GREEK LUNATE EPSILON SYMBOL; LATIN SMALL LETTER V; GREEK REVERSED LUNATE EPSILON SYMBOL; LATIN SMALL LETTER N (U 0053, U 03F5, U 0076, U 03F6, U 006E)

Language Support:

Seven is localised in English, French, German and Portuguese.

System Requirements:

- * OS X 10.7.3 or later
- * 7.9 MB

Pricing and Availability:

Seven 1.0.1 is \$4.99 USD (or equivalent amount in other currencies) and available worldwide through the Mac App Store in the Productivity category. We welcome reviews of Seven. We provide NFR licenses on request to members of the Press. Requests for such licenses, and any other questions, may be sent to Press Support.
