

Freeridecoding releases BurnAgain DVD 1.2 with DVD-RW support

Published on 07/02/07

Freeridecoding released BurnAgain DVD 1.2, a new version of the only application on the Mac that lets you add files to your CDR, CDRW or DVDRW several times - without creating multiple volumes -. Version 1.2 brings support for DVD-RW media which makes BurnAgain DVD

the first application on the mac that lets you burn to a DVD-RW more than once.

Freeridecoding released BurnAgain DVD 1.2, a new version of the only application on the Mac that lets you add files to your CDR, CDRW or DVDRW several times - without creating multiple volumes -. Version 1.2 brings support for DVD-RW media which makes BurnAgain DVD

the first application on the mac that lets you burn to a DVD-RW more than once.

BurnAgain DVD simply adds files to a disk several times (without creating multiple volumes and without erasing) in a platform independent way. If items are burned twice BurnAgain DVD automatically evaluates the changes and adds only the new or changed files. BurnAgain DVD allows to change the title of the disk at each burn, hiding of previously burned sessions and preserves all HFS specific attributes (resource forks). BurnAgain DVD supports the use of Aliases and Tigers "Burnable Folders".
