

Nisus Software Releases InfoClick 1.1

Published on 07/18/13

Nisus Software has announced the release of InfoClick 1.1, its uniquely powerful email search tool designed to guide you to the emails you've been trying to find. Among the new features are allows searching by Apple Mail accounts, mailboxes, and folders, negated searches allow finding items that do not contain a particular selector (eg: word, contact, etc), can search for emails in trash folders using a "Trashed Emails" selector, and other additions, fixes, and improvements.

Solana Beach, California - Nisus Software has announced the release of InfoClick 1.1, its uniquely powerful email search tool designed to guide you to the emails you've been trying to find.

InfoClick 1.1 adds new features while addressing some important issues. Among the new features are:

- * Allows searching by Apple Mail accounts, mailboxes, and folders.
- * Negated searches allow finding items that do not contain a particular selector (eg: word, contact, etc). For example, you can negate a search term by typing an exclamation mark before you type the term (eg: "!pluto" searches for all emails that do not contain the word "pluto").
- * Can search for emails in trash folders using a "Trashed Emails" selector.
- * Added "Email" menu to the main menu bar with some convenient commands like Reply and Forward.

There are many other changes, fixes, and improvement, including faster response while typing, expanded listing results, and more. The full list of changes and fixes can be found at the InfoClick release notes page.

InfoClick is designed to be used with Apple's Mail application to navigate through your emails to see the words, contacts, and information within. InfoClick knows precisely what words you've used, so there's no guessing; it offers a guided process of progressively narrowing down the matches in a series of simple choices. That means you can't ever produce a search with zero matches. For example, when you're searching for all emails containing a particular word, InfoClick would show the completions "connection", "connexion", and (the misspelled) "connecision", if you'd actually used those words in your emails.

System Requirements:

InfoClick requires OS X 10.6.6 or above with Apple's Mail.app

Pricing and Availability

InfoClick 1.1 is available now at the InfoClick web site and the Mac App Store for only \$15 (USD). A 15 day demo is also available from the same page. The update is free for current owners of InfoClick.
