

## **League of Mages Unique MMORPG with Gesture-Control Now Available for iOS**

Published on 07/25/13

i-Free Innovations, mobile game and app producer, together with Creat Studios, a successful developer of games for PlayStation, today announced that League of Mages, a unique online multiplayer fighting RPG, is now available in the App Store for iPhone, iPad and iPod touch. "League of Mages" enables mobile gamers to engage in gesture-controlled battles between players in magic tournaments. Strong spells can be composed by capturing multiple runes of the same element.

Saint-Petersburg, Russian Federation - League of Mages lets players compete as real mages, using gestures to cast spells and defend themselves in online magic duels. The game makes use of intuitive gestures familiar to Apple users, like grabbing a magic rune and swiping it towards the enemy to create a spell or attack. Strong spells can be composed by capturing multiple runes of the same element.

As the game advances, characters gain experience points and unlock additional RPG elements, including character development, skill customization, spell crafting, and additional equipment. A young magician's armory includes fifty wands; dozens of spells; and multiple magic tricks, including potions and elixirs, magic shields, and even magic gems.

The mysteries of new spells and combined effects will be revealed to gamers as they progress through the levels. The game features different quests that can greatly influence gameplay and grant additional rewards on completion. Winners of the weekly tournament tables will also receive generous rewards that they can use to their character's bag of tricks.

League of Mages is a fascinating game for all ages, featuring bright and rich gameplay designed specifically for touchscreen devices, engaging graphics, and atmospheric voiceovers. Gameplay starts out easy, but the increasing difficulty posed by differing skill and characteristic combinations will challenge even experienced gamers.
