

Clever Coding and Southwest Apps Announce Release of Domino Domino Lite

Published on 06/09/09

Clever Coding, in partnership with Southwest App, today announced the release of their newest 3D iPhone application, Domino Domino Lite. The first thing users notice about Domino Domino Lite is how fun and easy it is to make your own domino course. Once users have built their course, they can choose how they want to watch their creation fall. Users can also experiment with a variety of objects provided by the game to add style to their course.

Springville, Utah - Clever Coding, developers of the hit game Paper Pilot, in partnership with Southwest App, have just announced the release of their newest 3D iPhone application, Domino Domino Lite. "We wanted to build a 3D game where the player creates their own 3D Domino Masterpiece, and then allow the user to watch their creation topple over from as many different angles as possible. This is a new genre for the iPhone. Allowing the user to create their own 3D environments and then give them the freedom to interact with them" said Clever Coding's President, Steve Moon.

The first thing users notice about Domino Domino Lite is how fun and easy it is to make your own domino course. Users simply select the tool they wish to use from the toolbar on the top of their screen, then use their finger to draw the course exactly how they pictured it. For example, when using the "Follow" tool, users can trace a path on the phone, and the game will automatically place dominoes following their path. Users can also experiment with a variety of objects provided by the game to add style to their course.

Some of these objects include, spiral staircases, bridges, stairs and even a mousetrap that flings a ball at its own target domino. Steve also mentioned that more objects are on their way if the game is popular enough on the iPhone. Once users have built their course, they can choose how they want to watch their creation fall. If the users select manual camera mode, they can control the camera using the two "touch joysticks" provided.

This gives the users the freedom to fly through their course as it falls, allowing them to watch from almost any angle. If users select automatic mode, the camera will automatically follow their domino line step by step, and the camera will smoothly follow the path they have created. When automatic mode is unable to follow the path, for instance if your path splits in two directions, the game will immediately switch you to manual mode. Domino Domino Lite is on the App Store now and is Free.

System Requirements:
iPhone and iPod Touch 2.1 or later

Pricing and Availability:
Domino Domino Lite 1.0 for iPhone is Free and available exclusively through Apple's App Store.
