

Pubblog Releases PixSteward 1.0.7 - Advanced Flickr Backup for Mac OS X

Published on 08/13/13

Pubblog today announced the release of version 1.0.7 of PixSteward, the essential Flickr backup, Flickr interface, and database for Macintosh. PixSteward Lite, the Mac App Store version of PixSteward is also now available for \$9.99. PixSteward lets users download their Flickr photostreams to their Mac, along with any titles, tags, descriptions, geographic info and EXIF data they have entered online. PixSteward is a powerful, easy to use interface to all of Flickr's functionality.

Murfreesboro, Tennessee - Pubblog announces the release of version 1.0.7 of PixSteward and PixSteward Lite, the essential Flickr backup, interface and database for Macintosh. PixSteward Lite is available for \$9.99 in the Mac App Store.

PixSteward lets users download their Flickr photostreams to their Mac, along with any titles, tags, descriptions, geographic info and EXIF data they have entered online. With PixSteward's powerful relational database, users can edit metadata as well as find, sort and export single images or multi-picture sets from their Flickr archive -- even when they aren't connected to the Internet. PixSteward is a powerful, easy-to-use, professional-grade interface to Flickr. PixSteward Lite limits users to a single Flickr account and restricts the saved location of the image database file to comply with Apple "sandboxing" requirements for distribution via the Mac App Store.

PixSteward is especially helpful for Flickr users who need to manage multiple Flickr accounts. PixSteward downloads and stores the original images from Flickr -- JPEGs, GIFs and PNGs -- so artwork containing transparency or vector paths (Photoshop JPEG) is preserved.

Photostream search with PixSteward is far faster and more sophisticated than online. PixSteward allows you to enter up to 20 terms per search and lets you name and save frequently-used searches. Database experts can "roll their own" by editing the SQL statement directly.

Results of searches can be rapidly exported from PixSteward for use in other image-editing applications and the user has an option to export "sidecar" text files containing the combined Flickr and EXIF metadata along with pictures.

When you are connected to the Internet and logged in to Flickr, PixSteward permits editing picture metadata, thus insuring sync is maintained between the cloud and your PixSteward local archive.

PixSteward goes well beyond other Flickr backup applications which merely download your photos to a folder. By combining image and metadata backup with a powerful relational database engine, PixSteward gives you the power of Flickr right on your Mac. With PixSteward you can use Flickr with greater confidence, knowing your essential images and information are safely preserved and accessible offline.

As PixSteward's veteran Mac developer John Seward (MailSteward, FileMyFiles) likes to say, "PixSteward doesn't replace Flickr, it completes it."

System Requirements:

- * OS X 10.6 or later
- * 2.8 MB

Pricing and Availability:

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

PixSteward Lite 1.0.7 is \$9.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the App Store in the Photography category.
