

FmPro Migrator 7.01 Adds Find Requests to PHP Web Conversion Feature

Published on 09/04/13

California based .com Solutions Inc. has released FmPro Migrator Platinum Edition 7.01 with support for Find Requests to the PHP conversion feature. Users may Add, Delete, Modify or Restore previously executed Find Requests from the navigation toolbar. FmPro Migrator is a stand-alone application which quickly and accurately migrates FileMaker Pro databases to MySQL, Oracle, Access, SQL Server, Sybase, DB2, OpenBase, PostgreSQL, FrontBase, SQLite and Valentina.

Fremont, California - .com Solutions Inc. has released FmPro Migrator Platinum Edition 7.01 with support for Find Requests to the PHP conversion feature. Users may Add, Delete, Modify or Restore previously executed Find Requests from the navigation toolbar.

Many FileMaker users make use of sophisticated Find Requests when performing searches. The addition of this enhancement to the generated PHP web application makes this functionality available with every supported SQL database server within a scalable PHP web application.

The Query toolbar includes support for creating and managing any number of Find Requests. Clicking the Add or Delete buttons will adds or delete a Find Request. Previous finds are listed in the Recent Finds menu. Selecting a Recent Find from the menu re-populates the fields with the previous values, where they are available for further editing or immediately searching by clicking the Find Records button. Clicking the First, Previous, Next, Previous, Last buttons on the Query toolbar provides navigation between multiple Find Requests for editing.

FileMaker solutions incorporating Tab Controls will now operate more like a desktop application regarding the automatic saving of the currently selected Spry TabbedPanel tab within the converted PHP web application. Additional enhancements with this release include:

- * The addition of an "*** Admin ***" option to the navigation toolbar list of converted forms to allow users to navigate back to the Admin page. /admin is now recognized in the routes.php file along with /default to redirect back to the admin page of the application.
- * Updated the core.php file to write SESSION info into the /tmp directory for the application instead of using the default PHP sessions in the web server /tmp directory. This change improves SESSION handling by making certain that each CakePHP application manages its own SESSION variables to avoid naming conflicts between multiple applications running on the same web server.
- * Updated the LiveCode icons on the GUI tab to use the new LiveCode Community Edition icon and logo. Projects can be converted for both LiveCode Community Edition and LiveCode Commercial Editions with FmPro Migrator Platinum Edition.
- * Updated the AccessDDRExport to v2.7 with Access to FileMaker form/report image handling improvements. The supplied AccessDDRExport27.accde/AccessDDRExport27.mde files are unlocked in order to enable localization and other changes as needed by customers. These Access database files can be edited by simply changing the filename from accde => accdb or .mde => .mdb.

Pricing and Availability:

FmPro Migrator Platinum Edition is priced at (\$600 USD) per developer and includes a copy of FmPro Migrator Platinum Edition for both MacOS X (Universal Binary) and Windows platforms. Existing FmPro Migrator Developer Edition customers may upgrade to FmPro
