

Reggie Ashworth announces All-New AppDelete 4.1 - Uninstall Anything

Published on 10/07/13

Independent software developer Reggie Ashworth has announced AppDelete 4.1, an All-New Mavericks update to his popular application deletion utility for Mac OS X. With a simple Drag & Drop, AppDelete will uninstall anything along with all of the associated items. Mac users will no longer have to hunt through their system to find and delete these items manually. AppDelete is a must-have utility for beta testers and casual users alike, and the perfect companion to any Mac fanatic's toolbox.

Anaheim, California - Independent software developer Reggie Ashworth today is proud to announce the release and immediate availability of AppDelete 4.1, an All-New Mavericks update to his very popular application deletion utility for Mac OS X. With a simple Drag & Drop, AppDelete will uninstall anything along with all of the associated items. Mac users will no longer have to hunt through their system to find and delete these items manually.

You can drag any item that can be uninstalled onto AppDelete: Applications, Widgets, Preference Panes, Plugins, Screensavers, etc. You can also activate AppDelete in many ways: dragging items onto main window, onto dock icon, selecting in menu, right-clicking using AppDelete workflow, dragging from Launchpad, and throwing items in the trash. When the preview screen appears you can uncheck any items you would like to exclude.

You also have several choices: delete the items, log only the items, or archive (copy) the items to a .zip file for safekeeping or reinstall at a later date. The items you delete will be moved to the trash and arranged in a folder so that you can see exactly what was deleted and you know exactly where it came from. The items will not be removed from your computer until you empty them from your trash. You can also undo the last delete if you choose.

Version 4 has been 100% redesigned and updated and just one look will show you that this is an entirely new AppDelete. AppDelete Version 4.1 will run on Lion, Mountain Lion, and Mavericks, and here are a few of the new features included:

New in Version 4.1:

- * All-New UI and revised workflow for the best AppDelete experience ever
- * Optimized for operation on OS 10.9 Mavericks (backwards compatible with Lion/Mountain Lion)
- * New and Improved search algorithm to find the most files ever
- * File sizes and grouping for all items
- * All latest technologies/dev tools being utilized such as Automatic Reference Counting and Grand Central Dispatch
- * Updated Tools menu with features such as showing Library folder and deleting .DS_Store files
- * All-New Genius Search and much improved Orphans search
- * Major updates to Hidden mode for background operation with menubar icon
- * Additional Preferences such as Ignore List and Protect Running Apps
- * Updated Help file to make options more clear to user
- * Fifteen languages: English, Chinese, Czech, Danish, Dutch, Finnish, French, German, Italian, Japanese, Korean, Portuguese (Brazilian), Russian, Spanish, and Swedish
- * Sparkle updater to always have the latest version (with new localizations)
- * And More...

Feature Highlights:

- * Search filters to find items for deletion fast (including old PPC apps)
- * Finds associated items that are invisible or hidden

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Trash monitoring so that simply throwing an app in the trash triggers AppDelete
- * Archive/Install from Archive feature for safekeeping and transferring items to another Mac
- * Password requested only once if needed instead of multiple requests
- * Keeps a Log of all activities and has the ability to Undo a deletion
- * Moves items into an organized deleted package in your trash
- * Force Empty Trash for stubborn to remove items

There are various options to make your AppDelete experience complete: Quick search filters to help choose items for deletion, Force Empty Trash, an Orphans feature to search and delete orphaned files, Install from Archive even for another Mac, various options in Preferences, and more. AppDelete is a must-have utility for software tinkerers, beta testers, casual users, and the perfect companion to any Mac fanatic's toolbox.

AppDelete supports language in U.S. English, Chinese, Czech, Danish, Dutch, Finnish, French, German, Italian, Japanese, Korean, Portuguese (Brazilian), Russian, Spanish, and Swedish.

AppDelete Version 4.1 offers an improved algorithm to find more files than ever before. There are also a number of localization updates including Korean for the first time, along with multiple bug-fixes and all-around improvements and optimizations. For full Release Notes see Changelog below.

System Requirements:

- * Mac OS X Version 10.7 Lion or later (Mavericks compatible)
- * Intel only
- * 12.4 MB Hard Drive space

Pricing and Availability:

AppDelete 4.1 is only \$7.99 (USD) for a single user license. Upgrades from Version 2/AppDelete Lite are only \$3.99 (USD). A full-featured demo is available. Note: Version 3 licenses without a serial number are also eligible for the upgrade.
