

Christopher Mullen Releases All New What to Wear Cycling 2.0 for iOS 7

Published on 10/21/13

Indie developer, Christopher Mullen releases What to Wear Cycling 2.0, a major update to his highly acclaimed app for iOS. Never be uncomfortable on a ride again. What to Wear Cycling is the best way to find out what to wear when cyclists ride. The app provides the best weather information and cycling clothing calculations, fully customizable preferences for personal levels of comfort, sharing, on and offline capabilities and more. Version 2.0 has been completely rebuilt and optimized for iOS 7.

New York City, New York - Independent developer, Christopher Mullen today releases a major update to What to Wear Cycling. Version 2.0 of the highly acclaimed app has been completely rebuilt and optimized for iOS 7. Never be uncomfortable on a ride again. Fully redesigned to take advantage of the newest iOS 7 features, with rich, beautiful photography, What to Wear Cycling is the best way to find out what to wear when you ride. Why get 30 minutes into a ride before wishing you had sleeves (or wishing you could ditch the jacket)? Get the info before you get on the bike, using the best local weather info, along with the best cycling clothing calculations. Then, get dressed and get on your bike!

Cyclists, editors, and technology experts from all over the world are saying great things about What to Wear Cycling, including (to name a few) SELF Magazine, The Washing Machine Post, Elcyclista, GearCaster, Tap! Magazine, Cyclepresse, Gelegenheitsradler, Grimpeur Heureux, and Global Cycling Network!

What to Wear Cycling is the only way to find out what to wear when you ride. Anytime. Anywhere. Why get 30 minutes into a ride before wishing you had sleeves (or wishing you could ditch the jacket)? Get the info before you get on the bike, using the best local weather info, along with the best cycling clothing calculations. Then, get dressed and get on your bike!

Weather Where You Are (Or Where You Aren't):

Getting dressed at the base of Tourmalet? In your own house? On a cycling vacation? Checking a location you're visiting tomorrow? Maybe you're checking a location that's being ridden in the Tour right now? What to Wear Cycling will sort out what you should wear, wherever you are, or wherever you aren't. Riding now? Riding tomorrow? We've got you covered. Or uncovered, as it were.

Conditions Determined By You:

Curious what to wear in a specific temperature range? What to Wear Cycling can do that, too. Standing in the fitting room of your favorite shop in thermal bib tights? Find out what needs to happen outside in order to wear them on the bike. Considering a ride in conditions that are vastly different from what's happening today or tomorrow? Throw some conditions at What to Wear Cycling and find out what you'll need. No wireless connection? Enter conditions yourself, and we're still there for you. And everything is always based on your personal settings, of course.

Settings For Your Comfort:

Roasting on a ride while your friends are chilly? Still cold when everyone else unzips their jerseys? What to Wear Cycling allows you to tailor settings to your personal level of comfort. Move the comfort slider to the right if you generally run hot. Slide it left if you tend to be cooler. What to Wear Cycling will calculate what your ideal clothing should be, all based on your level of comfort.

Share With The Peloton:

"What are you wearing?" isn't the most elegant question to ask your fellow cyclists. Let

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

What to Wear Cycling tell them. With a tap, the whole peloton can get advice on what to wear on today's ride, tomorrow's ride, or a ride with whatever conditions you choose. Friends don't let friends freeze (or cook).

Save Your Favorite Locations:

Got a place you like to ride that isn't where you currently are located? A nearby mountain? A coastal road? Maybe it's a mountain in Italy. Save the location, and choose it from your Favorites to find out what to wear there. When you first load the app, some great defaults are already included, like Deinze, Belgium, where Merckx trained, and Huez, France, where cyclists suffer every summer. Add and delete as often as you like.

Units For Everyone:

Some of us like our wind speed in kilometers per hour. Others like miles per hour. Prefer Fahrenheit to Celsius? Think freezing means 0 degrees? What to Wear Cycling will let you use what works for you. And you'll ride comfortably no matter what.

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 7.0 or later
- * 11.1 MB

Pricing and Availability:

What to Wear Cycling 2.0 is \$2.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the App Store in the Sports category.
