

Just a dollar to safeguard your home from fire

Published on 10/29/13

Turn your iPad into your home fire alert system when you are away from home. AlertAppDevelopment is proud to announce the update FirstFireAlert for iOS. FirstFireAlert is the first application to provide an automatic technique to communicate the warning of 'ringing fire alarm' immediately to your phone while you are away from home. On getting the fire alert on your phone, you can take the necessary steps to stop the fire hazards.

Dombivili, India - AlertAppDevelopment is proud to announce the update FirstFireAlert for iOS. FirstFireAlert is the world's first \$1 application that converts your iPad into your home's fire alert system.

On detecting smoke or fire at home, the home fire alarm starts ringing. If you are at home, you hear the ringing fire alarm and act to stop fire.

But what if you are away from home when the Fire alarm starts ringing? Naturally, you will not hear the warnings sounded by ringing fire alarm if you are away from home. Therefore, you cannot do anything to minimize the risks of possible fire hazards.

FirstFireAlert is the first application to provide an automatic technique to communicate the warning of 'ringing fire alarm' immediately to your phone while you are away from home.

When the home fire alarm starts ringing, FirstFireAlert app initiates a automated call from your iPad kept at home to your Phone to alert you about the fire alarm ringing in your home.

On getting the fire alert on your phone, you can take the necessary steps to stop the fire hazards.

FirstFireAlert is a simple way of hearing fire alarms ringing at home while you are away from it. This gives you the quickest possible chance of responding by calling the fire brigade and making sure everyone is out of the house in time.

You do have to have a WiFi connection for your iPad and your phone Internet connected but it could prove a really good early warning system if a fire breaks out at home while you aren't there. And it only costs a dollar!
