Phonegap is an open source development framework to create natively-installed mobile applications on multiple platforms using traditional web-based technologies. Phonegap is single application that runs on all platforms.

Gurgaon, India - Phonegap is an open source development framework to create natively-installed mobile applications on multiple platforms using traditional web-based technologies.

Why Phonegap Development:

Phonegap is single application that runs on all platforms. It is a cross-platform framework widely used to create mobile applications. It even supports various languages like HTML 5, CSS and javascript.

Phonegap is widely used to develop applications for Android phones, iPhones, iPads, Blackberry and Windows phones .

Below are some reasons that will certainly drive you towards Phonegap:

- \* Native Features like Accelerometer, Camera, Compass, geolocation etc.
- \* Simply requires knowledge of CSS, javascript, JQuery
- \* Compatibility with major platforms
- \* Can be Extended with native plugins
