

## Opcoders introduces Triangle Draw 2.0 for iOS - Popular Drawing App

Published on 11/11/13

Opcoders today introduces Triangle Draw 2.0, a major rework of their popular drawing app for iOS. Triangle Draw lets designers create logos, shapes and patterns. You get a black canvas where you draw with white triangles. Although the concept behind the app may seem simple, the room for creation is extensive and vast. The style is monochrome, minimalistic and retro looking. Designed for iOS7, version 2.0 offers many new features, including a larger canvas area, PDF export, undo/redo and more.

Copenhagen, Denmark - Opcoders today is proud to announce the release and immediate availability of Triangle Draw 2.0, a major rework of Triangle Draw, a drawing app for iPad iPhone which lets designers create logos, shapes and patterns. You get a black canvas where you draw with white triangles. Although the concept behind the app may seem simple, the room for creation is extensive and vast. The style is monochrome, minimalistic and retro looking.

Unlike other drawing apps that offers colors where lots of time is wasted on switching between colors, Triangle Draw switches instantly, because there are only black and white. There is no time consuming step where you have to pick the right color. This makes a short feedback cycle, which is important for the user experience, and allowing for many quick design iterations.

One of the significant changes is that the canvas area has been extended from 20x13 cells to more than 100x100 cells. The visible area can be zoomed and panned with a two finger pinch gesture. This allows users to create more detailed drawings. Also the canvas shape has changed from being rectangular to now being hexagonal. "The crazy thing about this new hexagonal canvas is that it can be rotated by 60 degrees. I have never seen this done before.", says the lead developer.

There are several other new features including the addition of PDF export, undo/redo as well as international language support. The app is designed for iOS7.
