

## RnSK Softronics releases WorldVoice Radio for iPhoneOS 3.0

Published on 07/03/09

RnSK Softronics has announced WorldVoice Radio 1.2.7.3 for iPhone and iPod touch. With a simple interface, WorldVoice Radio is designed to make microCasts - short podcasts on-the-go. WorldVoice Radio brings the retro concept of the handheld shortwave into the 21st Century, allowing anyone to not just listen to Internet Radio, but to create it with ease. Features Push Notification, Shake-to-Scan and in-app Email, as well as Web and Twitter integration.

Gwynn Oak, Maryland - WorldVoice Radio is designed to make "microCasts" - short podcasts on-the-go - with a simple interface. Just a quick press of a button and your latest joke, rant, poem, or pontification is On Air for the world to enjoy your creativity, wit, skill, and talent.

The animated onscreen map displays stations from all over the world, updated regularly. Listeners can search the On Air Directory for stations and shows they may like, or touch the Scan buttons to explore. With Shake-to-Scan, listeners can jump from station to station without even looking at the device.

Stations can be saved as Presets with a simple touch, and since WorldVoice Radio is Push Enabled, whenever any Presets are updated WorldVoice plays an alert, even if it isn't running. Additionally, when someone leaves a comment on user's station, WorldVoice lets them know even if it isn't the active application.

WorldVoice is designed for anyone to be "On the Air" fast by "QuickCasting" right from the radio with a single button, but also allows more advanced users to upload pre-produced ? others.

Since everyone doesn't have an iPhone or iPod touch yet, every WorldVoice station is available for listeners via the Web. WorldVoice's built-in Twitter integration makes it easy to announce your latest show to the world.

Listeners that do have an iPhone or iPod touch can save WorldVoice Web Stations from Safari to the Home Screen as a fullscreen Web App for direct One-Touch access to stations they enjoy.

Kai Cherry of RnSK, says, "Pretty much everyone knows how to listen to Internet Radio and Podcasts, but creating content of their own isn't particularly easy. WorldVoice was designed so that pretty much anyone, from kids, Moms, people promoting a blog or business or even seasoned professionals could be a part of the Net Radio Revolution without a lot of complexity...and do it from pretty much anywhere."

From the creators of iPSP and Forty-TwoDVDX Plus for Mac and the engineering team behind MeToo! Golf and Boom!BOOM! Shotgun Pro for iPhone and iPod touch. WorldVoice Radio - Your Voice. From Anywhere. To Everywhere.

### Feature Highlights:
