

Access your iTunes Video Library from anywhere with Expanse for Mac

Published on 11/29/13

Moscow based developer, Roman Sokolov today introduces Expanse 1.0.1 for Macintosh, an update to its popular web server that allows you to access your iTunes video library from anywhere in the world. Using an ordinary Internet browser, Expanse also allows users to create video podcasts using their iTunes library as a source of Movies and TV shows. In addition to fixing bugs, the update now gives users the ability to subscribe to podcasts using a podcatcher application like Instacast.

Moscow, Russian Federation - Independent developer, Roman Sokolov today is pleased to announce the release and immediate availability of Expanse 1.0.1 for Macintosh, an update to its popular application that allows users to access their iTunes video library from anywhere in the world. Using an ordinary Internet browser, Expanse seamlessly syncs with portable devices and computers including Android and Windows. Expanse gives users the ability to download and view videos from their iTunes library on any HTML5-supported device. Using the iTunes library as a source of Movies and TV Shows, Expanse also provides the option to create video podcasts.

With the update to Expanse, users can subscribe to podcasts on any gadget by utilizing a podcatcher application like Instacast. Once the subscription is configured in the podcatcher application, new "episodes" and videos are automatically downloaded to the user's device every 24 hours. The user can also complete a full scan of the iTunes library more frequently.

Feature Highlights:

- * Ability to access iTunes video library on any portable device or computer including Android and Windows
- * Support automatic downloads of new videos through podcatcher
- * Support automatic monitoring of the availability of video downloads through podcatcher
- * Ability to toggle between "Local network" and "Internet" mode
- * Easy-to-use interface and simplified set-up

Expanse possesses an easy-to-use interface and simplified set-up. The Main Menu automatically sorts the video library into four categories (All Movies, 20 Most Recent, 20 Most Recent Unwatched, 20 Least Recent Unwatched) so searches for content are effortless. The Settings Menu offers the option to set preferences of video quality (SD, 720p, or 1080p) for podcast subscriptions. Users can choose to access Expanse in the "Local network" or "Local network and Internet" modes to safely and securely view their video library.

"Expanse is essentially a Web server," says owner, Roman Sokolov. "Using Expanse allows individuals who have smartphones and tablets that are not Apple products to easily and conveniently access the contents of their iTunes video library. Now they can download and view their movies and TV shows at home, at the local cafe, and on the road. It is my hope that Expanse allows people to simplify an already simple life."

System Requirements:

- * Requires OS X 10.7 or later
- * 64-bit processor
- * 4.4 MB

Pricing and Availability:

Expanse 1.0.1 is only \$4.99 (USD) and available worldwide through the Mac App Store in the Utilities category. A trial version is also available for download.
