

Xeric Design releases EarthDesk 5.0.1 - Improves Stability

Published on 07/06/09

Xeric Design today is pleased to announce the release of EarthDesk 5.0.1, a major upgrade to its award-winning, real-time dynamic desktop map, for Macintosh OS X. EarthDesk 5.0 has been entirely rewritten in Cocoa, adds many new features and is fully compatible with both Leopard and the upcoming Snow Leopard. Version 5.0.1 is an update to fix three issues uncovered since the release of 5.0.

Incline Village, Nevada - Xeric Design, Ltd. is pleased to announce the release of EarthDesk 5, a major upgrade to its award-winning, real-time dynamic desktop map, for Macintosh OS X. EarthDesk 5.0 has been entirely rewritten in Cocoa, adds many new features and is fully compatible with both Leopard (OS X 10.5) and the upcoming Snow Leopard (OS X 10.6). 5.0.1 is an update to fix three issues uncovered since the release of 5.0.

EarthDesk replaces your static desktop with an image of the Earth showing current sun, moon and city illumination, as well as real-time global cloud coverage, allowing you to track hurricanes and other weather systems on your Macintosh or Windows desktop.

The software operates silently in the background, keeping your desktop updated while you work. Unlike a screen saver, which only appears when your system is idle, EarthDesk's dynamic desktop is continuously displayed as your desktop background (and optionally as a screen saver).

Fixed in 5.0.1

- * Fixed a permissions bug that caused the list in the Locations Tab to be blank when installed for "all users"
- * Fixed a bug that prevented clouds from working or crashed on systems with non-English date formats
- * Fixed a bug in the "borderless window" option that caused a rare crash especially when waking from sleep

Major new features introduced in 5.0:

- * Faster rendering, lower processor usage, more robust and a cleaner interface
- * Seasonal maps, with snow and vegetation levels changing month-to-month
- * Supports higher resolution map and cloud data on large displays
- * Adjustable brightness and background color
- * Starfield background option
- * Updated political map now displays city lights and/or moonlight
- * Supports dual GPUs controlling a single screen as with the new unibody Macs
- * Checks for updates automatically

Other improvements in 5.0:

- * The globe projection can now be positioned anywhere on the screen
- * EarthDesk now properly handles monitor attach/detach while running
- * When overlaying desktop pictures, the image aspect ratio is respected
- * Original desktop restored upon quit, including periodic picture changing
- * EarthDesk now displays details of the cloud capture date and time
- * The evaluation watermark in the unlicensed version is now softer

EarthDesk 5.0 is a full rewrite, with many internal improvements:

- * EarthDesk's rendering engine has been fully rewritten in Cocoa
- * 32/64 bit application and ready for Snow Leopard
- * No dependence on older Carbon or QuickDraw technologies
