

app4mac releases CheckUp 2.5 for Mac OS X 10.5 Leopard

Published on 07/09/09

app4mac today released CheckUp 2.5, a new update to the innovative tool that allows you to check the health and monitor the behavior of a Mac computer. Built from the ground up with Mac OS X technologies, CheckUp features an amazing user interface. CheckUp is designed to check your disks and memory but also to monitor the usage of CPU, Memory, Disk Drives and Network Adapters in a very visual way. CheckUp works with any Mac with a PowerPC G4, G5 or Intel Processor.

San Jose, California - app4mac today released CheckUp 2.5 for Mac OS X 10.5 Leopard, a new update to the innovative tool that allows you to check the health and monitor the behavior of a Mac computer (even from a remote computer). Built from the ground up with Mac OS X technologies, CheckUp features an amazing user interface. CheckUp works with any Mac with a PowerPC G4, G5 or Intel Processor. With its use of the latest Mac OS X technologies, breakthrough ease-of-use and innovation, all Mac users will find CheckUp very useful and even fun. It's the dashboard of your Mac!

CheckUp is designed to check your disks and memory but also to monitor the usage of CPU, Memory, Disk Drives and Network Adapters in a very visual way. By adding rules that will be triggered when certain conditions are met for a specified resource on the computer, you can receive visual notifications. For example, CheckUp can alert you when a hard drive seems to have hardware failures, even when the application is not opened (thanks to an innovative background process).

Testing Memory and Disks

CheckUp allows you to check your memory to detect bad components. Defective RAM are often responsible for the instability of your system. CheckUp also uses S.M.A.R.T. technology, which is a monitoring system for computer hard drives. In the hopes of anticipating failures, CheckUp detects and reports various indicators of reliability.

Monitoring System Capabilities

CheckUp allows you to discover your computer's capabilities in a very visual way. It also helps you to learn about supported operating systems. You can check if your Mac is able to run Windows XP, Windows Vista, Linux, etc. You can find out how many Applications, Fonts, Drivers or Extensions are installed on your computer, as well as lots of other useful information.

Monitoring Processors

System load shows you your processor usage in percents, as well as the total number of running processes and threads and the available memory. It helps you understand how to improve the performance of your computer.

Monitoring Used Bandwidth

Some causes of high network activity are linked to peer to peer connections, file copying or large print jobs. Use CheckUp to create a log and calculate the network utilization. CheckUp can display the bandwidth data in a real-time graph. It records all network traffic and the total amount of data transferred on your network.

Monitoring Processes

The processes manager helps you get to know all about running programs and managing them. You can terminate a process or temporarily stop it. This tool can give you additional information about selected process: memory used, processor power used, etc.

Multiple screens support

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

If you have two or more screens, you can decide on which screen to display the information.

Advanced Remote Monitoring

With CheckUp, you can monitor CPU, memory, disks and the processes of one or more remote computers through a simple TCP/IP network connection. This can be helpful if you want to monitor the activity of your servers

What's new with version 2.5 ?

- * Updated user interface
- * Compatible with recent Macs
- * Improved System view
- * Option to export graph data
- * Option to choose the default app for any type of document
- * Option to choose any folder for duplicates checking function
- * Uninstaller now integrated
- * Ready for Snow Leopard

This new version is free for all owners of a user license. CheckUp costs only 29 Euros with free upgrades/updates for your entire life. CheckUp 2.5 requires Mac OS X 10.5 Leopard. A beta version is available. Final version is planned for July 14, 2009.
