

iSmiley's for iOS - The spice in your texts

Published on 01/03/14

Indie app developer, Jaskaran Singh today announces iSmiley's 2.3 for iOS, a unique and fun way to communicate. iSmiley's gives you the capability to create your own emoticons and share them with your family and friends. The app provides you with easy-to-use tools to help create your own HD quality emoticons. Choose from a range of skins, eyes, head gear and expressions to share what's on your mind. You can save your creations to the photo gallery, as well as the app's gallery for future use.

Delhi, India - It was in 1881 when the first emoticons were used in an American magazine Puck. Ever since, we all have used emoticons to express our emotions. Be it a simple :) or the :P. Now what if you have a tool in your hand that helps you to really convey your true emotions without any textual words? iSmiley's is an application developed exclusively for doing just that. It's the next cool thing.

iSmiley's is specifically designed for the ones who like being creative and different in their way of communication. What iSmiley's brings to your iOS device is the ease to build your own emoticons. It is equipped with a seamless and gorgeous UI and brings forth these beautifully designed facial expressions. You can give your emoticon a character by using funky headgear or a prop. With iSmiley's you can create your own emoticons and share them instantly via iMessage or the various other messaging apps. You can also share them by posting them on Facebook, Twitter or Instagram.

What impresses the most about iSmiley's is the high quality graphics, which don't distort when enlarged. Yes, that's right, you can resize every object, as you desire & share the same with the quality intact. The app also provides a pre-made set of emoticons (iSmiley's Bags) to get you started. You can save your creations to the photo gallery, as well as the app's gallery for future use. One of the most exciting features is being able to make a group of emoticons together.

Features of the app include:

- * High-Resolution Graphics (Retina Display Enabled)
- * Seamless and Gorgeous UI
- * Create hundreds & thousands of customized emoticons
- * Choose from various skins, eyes, facial expressions and headgears
- * Create and Manage custom iSmiley's app gallery
- * iSmiley's Bags - set of ready-to-share smileys
- * Instantly share with friends via Messengers, Facebook, Twitter, Instagram or Email

Here's what Jaskaran Singh, the brain behind this unique app, had to say, "I really felt the need to create & customize my own emoticons and was getting tired of using the same keyboard based emoji icons. I couldn't find any custom emoji apps that were good enough. So I designed one myself."

According to the developer, there are many more exiting features & enhancements planned, which will well enough make iSmiley's the go to app for emojis & emoticons. Note that an Android version is also in the works.

Device requirements:

- * iPhone, iPod touch and iPad
- * Requires iOS 5 or later
- * 46.2 MB
