

Bright-Crayon, LLC Announces Release of SkyBlue Canvas Lightweight CMS

Published on 01/30/07

Bright-Crayon, LLC announces the release of SkyBlue Canvas Lightweight CMS v1.0. SkyBlue Canvas is not meant to replace any existing CMS but rather to fill a gap in the market for lightweight content management systems. SkyBlue Canvas is built specifically for small businesses who need an easy-to-use and easy-to-setup system.

Bright-Crayon, LLC has announced the official release of SkyBlue Canvas, a lightweight content management system (CMS) for small business and personal websites. SkyBlue Canvas is not meant to replace any existing CMS but rather to fill a gap in the market for a lightweight content management system.

"We initially developed SkyBlue Canvas to meet the needs of our own small business clients but quickly recognized the need for such a system in the marketplace.", says Scott Lewis, a partner in Bright-Crayon, LLC and the lead developer of the SkyBlue Canvas software. "We designed the system to be intuitive and easy-to-use for end users, while including features that website developers have come to expect including skinnability and extensibility".

SkyBlue Canvas runs on the Apache web server and is written in PHP4. The system can manage multiple websites so only a single instance is needed per web server. For a full feature list, visit <http://www.smartsitemanager.com/SkyBlue-Canvas-Features-pg-2.htm>

SkyBlue Canvas offers two license options. The first option, a service package for business owners includes site setup and hosting. The second option, for developers, includes a license of the SkyBlue Canvas code.

A online demo of SkyBlue Canvas is available at <http://www.smartsitemanager.com>

Bright-Crayon, LLC is a software development company located in Richmond, Virginia. The principals in Bright-Crayon have earned their average 20 years of experience in IT, research and marketing working for fortune 100 companies, SMEs, and universities.
