

codepoetry releases Notae 2.1

Published on 07/18/07

codepoetry has announced the release of Notae 2.1. Notae 2.1 brings significant improvements over the previous version of the popular advanced notebook software by including such features as complete AppleScript support for note and tag creation and manipulation as well as import and export of notes to various formats, a URL download queue for downloading large numbers of Web Notes, and a resizable Tag Browser view.

FOR IMMEDIATE RELEASE

codepoetry has announced the release of Notae 2.1. Notae 2.1 brings significant improvements over the previous version of the popular advanced notebook software by including such features as complete AppleScript support for note and tag creation and manipulation as well as import and export of notes to various formats, a URL download queue for downloading large numbers of Web Notes, and a resizable Tag Browser view.

Notae is a powerful solution to the problem of keeping track of notes and information that a user collects while working with the computer. By incorporating the full power of Mac OS X's text system, Notae presents an easy and capable workspace for writing short notes or long essays, all with easy access to Mac OS X's powerful typography tools. While other tools merely include the standard Apple Text menu, Notae has assigned traditional keyboard shortcuts to kerning, leading, and other text commands so that you never have to leave the keyboard to get the look you want or navigate through your notes.

In addition to creating text notes, Notae allows users to keep PDF notes or even download web pages as Web Notes for future reference. Every note type can be tagged and organized, enabling the user to easily locate the note in the future via the innovative Tag Browser feature.

Notae 2.1 requires Mac OS X 10.4 or later. After the 28-day demonstration period, the program can be registered for \$29 USD.
