

IP Camera Recorder for Mac and PC is Released

Published on 02/07/14

DComplex, LLC today announces version 2.40 of IP Camera Recorder, a major update to its popular video surveillance software for Mac and PC. Setting up a video surveillance system at home or an office has never been easier. IP Camera Recorder allows anyone to monitor up to 20 IP Cameras simultaneously on a Mac and PC, record video from the cameras, detect motion, control PTZ and more. This version adds support for many models of IP cameras and improved Motion Detection.

Rochester, New York - DComplex, LLC today is thrilled to announce the release and immediate availability of Camera Recorder 2.40. IP Camera Recorder lets users to keep an eye on their home and business. Monitor one IP Camera or dozens installed at different sites, seamlessly.

The companion free iPhone/iPad app allows users to instantly respond to motion events, remotely watch live video, search and playback recorded video effortlessly.

Setting up a video surveillance system at home or an office has never been easier. IP Camera Recorder is an advanced yet easy to use video surveillance solution designed to use the best features of the Apple products. Encrypted remote connectivity allows users to record video from IP Cameras on one computer and remotely review it using slick apps from iPhone or a remote computer.

Customer quotes:

"Extremely easy to use" and "no other Mac program in camera management comes close".

Major improvements in version 2.40 include:

- * Added support for more models of IP Cameras
- * Improved Motion Detection.

With affordable Day/Night IP Cameras from manufacturers such as D-Link, EasyN, Foscam and many more (see Supported Cameras), Mac and PC users can now quickly setup a home surveillance system.
