

FileApp 4 the iPhone File Manager Rewritten and Redesigned

Published on 02/12/14

Geneva based DigiDNA announces FileApp 4.0.3, an update to its popular file and documents manager for iPhone, iPad and iPod touch devices. FileApp reads many files types such as PDF, Microsoft Office documents and plays multimedia contents. FileApp will let you store files and folders on your iOS device just like Windows Explorer or the Finder on the Mac. The new app interface matches the iOS 7 style redesign and marks the beginning of a new era for FileApp.

Geneva, Switzerland - DigiDNA, a leader in iPhone document storage and file transfer with computers, is happy to announce the release of the fourth version of FileApp, its Free iPhone File System and PDF reader on the App Store. Embracing the new iOS 7 interface design style the app now reveals a totally uncluttered interface. Leaving aside aesthetic considerations this restyling renders the app easier to use as ever before.

The simplified Home screen has a new Sharing button giving access to all file sharing options. We added an all new computer browser file sharing feature that allows to drag and drop multiple files wirelessly from a computer's Internet browser directly into FileApp. Now both Http and Ftp file sharing modes can be protected with a username and passcode.

We also added a swipe gesture to reveal file actions and file deletion. The photo picker has been tweaked to better add multiple images to FileApp from the device's photo library. To ensure the broadest PDF support we restored the dual PDF reader option allowing to use the iOS built-in or the custom annotation PDF editor freshly revised for iOS 7.

Instead of offering a free and a paying version the free/In-App purchases model allows for easier app trial, simplified upgrade and fair pricing. The premium features are now offered through a choice of 3 premium features Add-On packs, allowing users to customize the app according to their needs. DigiDNA will now keep its focus on a single app and FileApp Pro users are encouraged to migrate to the New FileApp where they will get all features they previously owned for free. (This feature itself is a technical premiere that has been already noted by several tech writers, for more details please check out DigiDNA's Team Blog linked to the Company's Website).

Two easy ways of transferring data from FileApp Pro have been designed. One method works using a computer - with DiskAid through an automated migration tool (free download and no license purchase or registration required). The other way is simply achieved on the device using FileApp Pro Zip archive creation and Open-In feature.

With the new FileApp, DigiDNA has gone all out on iPhone file storage performance. The whole app has been rewritten to offer the most stable and reliable FileApp ever. Moreover thanks to the merge between FileApp Pro and FileApp the Development Team is now focused on a new and modular single app that will allow them to quickly release new exciting features in the upcoming months.

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 6.0 or later
- * 23.4 MB

Pricing and Availability:

FileApp 4.0.3 is Free and available worldwide exclusively through the App Store in the Productivity category.
