

Storage Made Easy adds support for Evernote

Published on 02/18/14

Storage Made Easy, the unified cloud provider, has added support for the Evernote(R) Cloud service. The SME Evernote implementation indexes the Evernote data and makes data available to be used with the SME Cloud File Manager. This Cloud File Manager unifies data from private data stores and public clouds and makes this data available in a traditional file manager view where it can be interacted with from either the web, from Mac, Windows and Linux desktop 'cloud' drives and more.

London, United Kingdom - Storage Made Easy today announced that they have added support for the Evernote(R) platform, using the Evernote(R) API. Evernote joins the 45 other Cloud Services that Storage Made Easy supports.

Jim Liddle, Storage Made Easy CEO said, "Evernote is a widely used service, not just by consumers but by a surprising amount of businesses due to its ease of use and on the move mobile and tablet app support. We have had increasing requests from our business users to add support for the Evernote cloud and we are pleased to announced that we now have."

The SME Evernote implementation indexes the Evernote data and makes data available to be used with the SME Cloud File Manager. This Cloud File Manager unifies data from private data stores and public clouds and makes this data available in a traditional file manager view where it can be interacted with from either the web, from Mac Windows and Linux desktop 'cloud' drives, or mobile Apps that supports iOS, Android, BlackBerry and Windows Phone.

For Business and Enterprise users SME is able to provide tracked audit history of Evernote usage, allow easy copying or backup Evernote files to other clouds, sharing of Evernote data externally using password protected and time expired links, as well as making the data available in a common way throughout and organisation, with permissions, without giving direct access to the underlying Evernote account.

The Storage Made Easy Business service is available as a hosted service on the SME US or EU server infrastructure or SME also provide an enterprise on-premise version of their product for use behind the corporate firewall.
