

Weather Pod for iOS - Elegant and Unique Weather Discovery

Published on 02/28/14

UK based app developer, Rory Buckley today announces Weather Pod 2.0, a major update to his popular weather discovery app for iOS. Weather Pod balances visual simplicity with advanced weather intelligence to give the user fast, accurate and frequently updated weather information, based on their current location. Version 2.0 boasts a completely new and different design, offering a fast and simple user experience, taking full advantage of iOS swipe and touch functionality.

Devon, United Kingdom - App developer Rory Buckley today is proud to announce a major update to Weather Pod, his popular weather discovery app for iOS. Version update 2.0 boasts a complete new look and feel, with many major alterations to the user interface, with the addition of new features and functions.

The update is inspired by Rory Buckley's original vision for Weather Pod. His ultimate goal for the app has always been for simple, elegant & fast weather discovery and he feels that version 2.0 has accomplished much, if not all of this.

Existing users will see many major visual changes, as Weather Pod no longer uses live motion video backgrounds. Instead, version 2.0 cleverly uses background graphics that reflect what the users live weather conditions are currently doing, so a user can expect to see rain showers & snow flurries if & when it's literally happening in their location.

The app is completely dependant on touch & swipe gestures to reveal & hide different sections of the users weather. Touching the main rain drop focuses on quick & simple navigation between weather summaries, ranging from live (updated every minute) conditions, plus an hourly, daily & weekly summary. The user can then discover a detailed 7 day forecast, daily astronomy, almanac and not to forget live weather alerts & nearby storms. These features can all be accessed using the appropriate swiping gesture.

Rory Buckley confidently believes that Weather Pod 2.0 has great potential & appeal. The app has experienced impressive worldwide chart positions over the last 12 months & he strongly believes that the best is yet to come.

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 4.3 or later
- * 27.0 MB
