

## **DiaLife iOS App Makes Weight Tracking and Glucose Level Monitoring Easy**

Published on 03/04/14

Dia-Life LLC announces DiaLife, a free iOS app intended for diabetics, professional athletes and people concerned with the quality of their nutrition. Now available to millions of iPhone and iPad users across the world, the app enables them to easily monitor the key parameters of their meals and keep glucose levels within set limits to sustain healthy diversity and safety of their diets. Through the use of convenient glucose level calculation tools, it is an indispensable aide for diabetics.

Moscow, Russian Federation - Dia-Life LLC announces the release of DiaLife, a free iOS application intended for diabetics, professional athletes and people concerned with the quality of their nutrition. Now available to millions of iPhone and iPad users across the world, the app enables them to easily monitor the key parameters of their meals and keep glucose levels within set limits to sustain healthy diversity and safety of their diets.

The app targets a very broad audience: from individuals paying attention to the quality of their nutrition and keeping a certain diet to professional athletes losing weight before important competitions. One of the key purposes of DiaLife is to become an indispensable aide for diabetics through the use of fast and convenient glucose level calculation tools and an integrated database of glycemic indices, the largest and the most comprehensive among all similar solutions.

The interface of the application consists of five sections, each responsible for a major aspect of the health monitoring process: a calorie calculator, a physical activity calculator, dishes, rations and a diary. Combined, these features provide an easy way of calculating daily calorie intake and spending, configuring typical multi-component meals for quick access in the future, planning diets and keeping a detailed log of weight loss efforts.

An indispensable app for any weight-conscious person, DiaLife offers one of the most lightweight, intuitive and user-friendly interfaces among similar solutions, and features a remarkably fast, comprehensive and ergonomic real-time search for ingredients and their nutritional properties. Products can be searched in real time using the initial characters of each word - that is, "roast turkey breast" can be entered as "ro tu br". Unlike many of its competitors relying on external data sources, DiaLife requires no Internet connection and can be used anytime, anywhere.

"We are very excited to release the long-anticipated mobile version of our service," commented Ivan Kalininskiy, CEO of Dia-Life LLC. "Millions of users, including those suffering from diabetes, can now take advantage of its handy features on the go with the same, if not greater, level of comfort - and it won't cost them a cent. We have pushed the envelope to make the app the perfect companion for users who have finally realized the true sense of the old saying that states that we are what we eat."

### Device Requirements:

- \* iPhone, iPad, and iPod touch
- \* Requires iOS 6.0 or later
- \* 5.1 MB
