

## **Glewp- A new service to share and discover iOS applications**

Published on 03/10/14

Glewp is a service that allows users and developers to post the apps they love or made and share them with the world. Using a voting system and an algorithm we ensure that only the best and most talked about apps reach the top pages. Because of the unique way in which Glewp works, users decide if an app or game deserves to reach the top and be discovered. The important thing is that the top pages will constantly be refreshed, ensuring that all apps or games get a chance to be seen.

Bucharest, Romania - The true value of any mobile device is given by the applications it has to offer, and there is no doubt that iOS has the best applications available out there, not only that, but, most of the new and innovative applications and games appear first on this platform. This all sounds good but a very important problem arises, the discoverability one.

Given the fact that there are now over 1,000,000 apps on the AppStore and more appear daily, with the AppStore top 200 being dominated by mostly the same apps, it is harder and harder to discover great new apps or to get discovered. This is where Glewp, a service that helps users and developers share and discover new exciting iOS applications, comes to fix all that.

Glewp is a service that allows users and developers to post the apps they love or made and share them with the world. Using a voting system and a carefully crafted algorithm we ensure that only the best and most talked about apps reach the top pages. Because of the unique way in which Glewp works, users decide if an app or game deserves to reach the top and be discovered. One of the most important things is that the top pages will constantly be refreshed with the help of the community, ensuring that all deserving apps or games get a chance to be seen.

If you are a user who loves an app or game so much that you want to share it with the world or a developer that wants his hard work to get noticed, Glewp will help you do just that and will allow people to judge your applications on their quality and not on their marketing budget. Glewp can be accessed through any browser having a mobile versions build from the ground up especially for the beautiful retina screens respecting Apple's design and quality guidelines. We want to give you the best experience possible while you search for that one app that will make you love your device even more.

How Glewp works? After creating an account, in the sharing section you simply start typing the name of the app you want to share and we will show you in real time all the iOS apps that match your name. After you find your app, you click share and we do the rest for you; we create the apps page, screenshots, icon, etc. Your app will be ready in seconds to be discovered and voted by our glewpers, it's that easy. Only apps that are live on the App Store can be shared on Glewp.
