

Eltima Software releases Recover PDF Password - Significantly Improved

Published on 07/29/09

Eltima Software today releases Recover PDF Password, their popular password recovery tool for Mac OS X. The new version of Recover PDF Password enables Mac users to drag and drop a file into the app, press the Decrypt button and immediately save a copy of the file with protection removed. It supports all character encodings and is able to recover passwords, typed in any language and in any keyboard layout. Recover PDF Password can retrieve Unicode Passwords for protected Acrobat 9.x files.

Bellevue, WA - Since the most common task is recovering the lost owner passwords of PDF files, Eltima Software decided to simplify this process. From now on if the PDF file is protected only with owner password (i.e. the file has no user password protection) there is no need to search for it and then enter the password in Adobe Acrobat to open the PDF file. The new version of Recover PDF Password enables Mac users to drag and drop a file into the app, press the "Decrypt" button and immediately save a copy of the file with protection removed.

If the PDF file was protected with unknown user password (or both user and owner password) the decryption option is still available. First Recover PDF Password will search for user or owner password. Afterwards, decryption option can be used in order to create unprotected copies of PDF files.

Recover PDF Password uses various methods to recover lost passwords: by password length, by template or exhaustive search method. All methods are provided to be successful, however, exhaustive search requires maximum time. It supports all character encodings and is able to recover passwords, typed in any input languages and in any keyboard layout. Moreover, Recover PDF Password can retrieve Unicode Passwords for protected Acrobat 9.x files.

Recover PDF Password features at a glance:

- * Supports Unicode passwords recovery for Acrobat 9.x files
