

Zevrix Solutions Releases BatchOutput 2.5 for Adobe InDesign

Published on 07/27/07

Zevrix Solutions announces the release of BatchOutput 2.5, a powerful professional solution to automatically print and export to PDF and PostScript multiple and single InDesign documents. BatchOutput allows to output multipage InDesign documents as single pages and provides a powerful variable names feature. The new version introduces tighter integration with InDesign CS3, makes it easier to control BatchOutput and add files directly from Finder, as well as other improvements.

Toronto (ON), Canada - July 26, 2007 - Zevrix Solutions announces the release of version 2.5 of BatchOutput, a powerful professional solution to automatically print and export to PDF and PostScript multiple and single InDesign documents.

BatchOutput automates output of InDesign documents to printer, PDF and PostScript using output presets or custom settings. It allows users to output multipage InDesign documents as single pages, change job name in printer queue, suppress the fonts and links warnings, and hide document windows during processing. With its powerful variable names feature, users can assign various attributes, such as page number, date and script label to compose the output file names automatically.

BatchOutput saves users valuable production time and simplifies workflow for service providers, printers, ad agencies and publishing houses by eliminating the hassle to open and print each document manually. Users only need to select the files to output and adjust the settings, and BatchOutput will do the rest automatically. And because BatchOutput can run in the background, it allows users to keep working with other programs during processing thus using their production time even more efficiently.

Version 2.5 introduces tighter integration with InDesign CS3, along with other new features:

- BatchOutput can now be conveniently controlled as a separate application while retaining its integration of an InDesign plug-in.
- Launch BatchOutput directly from the InDesign CS3 menus.
- Add files directly from Finder via drag-and-drop on BatchOutput icon or through the "Open With" contextual menu.
- Option to save files after output, preserving the output settings.

BatchOutput also provides detailed status report during the processing and features an interactive file list with the options to open files in InDesign and reveal them in Finder.

Pricing and Availability:

BatchOutput 2.5 can be purchased from the Zevrix Solutions web site for US\$79.95, as well as from authorized resellers. Demo is also available for download.

BatchOutput 2.5 is available for Mac OS X 10.4.2 and higher, Universal Binary, and works with Adobe InDesign CS, CS2 and CS3.
